

PRESS RELEASE

CleanAir Logix Orders Heavy Duty LNG Trucks for Operation at Port of Oakland

August 21, 2008

New Port Opportunities for Westport Fuel System Solutions with Low Emissions and Fuel Price Savings

VANCOUVER, BC – Westport Innovations Inc. (TSX:WPT/NASDAQ:WPRT), a global leader in alternative fuel, low-emissions transportation technologies, announced today that CleanAir Logix of Oakland, California has ordered 9 Kenworth T800 heavy-duty liquefied natural gas (LNG) trucks, featuring Westport's High Pressure Direct Injection (HPDI) technology, for deployment at the Port of Oakland. The Port will use the trucks for hauling containers to and from the seaport.

"The Port of Oakland shares everyone's concern about air quality in our community and the Bay Area. We are working to find responsible solutions meeting the needs of the Port and its neighbors," said Omar R. Benjamin, Executive Director at Port of Oakland. "These LNG trucks will help support our goal, that by the year 2020, the Port of Oakland will have cut the health risk from diesel particulate matter at our seaport by 85 percent." The Port of Oakland oversees the Oakland seaport, Oakland International Airport and 20 miles of waterfront. The Oakland seaport is the fifth busiest container port in the U.S.

"We are proud to be a part of this transaction resulting in LNG trucks operating here at home in and around the Port of Oakland," said Bob Cross, Co-Founder, Chairman and CEO of CleanAir Logix. "We specialize in environmentally responsible logistics solutions, and these Kenworth trucks featuring the Westport ISX G engine fit the bill for this application and our corporate mission to provide practical and commercially viable alternative-fuel based solutions."

"We are pleased to see Westport's product going into operation in another busy California port," added Michael Gallagher, President & Chief Operating Officer of Westport Innovations. "The environmental and economic benefits of clean, low-carbon, and domestic LNG are leading more and more truck fleets to consider LNG trucks. The Westport ISX G and LNG fuel system on the Kenworth T800 provides operators with a robust, high performance package that addresses those needs."

About Westport's ISX G and LNG System for Heavy Duty Trucks

Westport's ISX G engine and liquefied natural gas (LNG) fuel system for heavy-duty class 8 trucks offers industry-leading emissions, including lower greenhouse gas emissions, than comparable diesel engines, and allows trucking fleets to move to lower-cost, domestically available natural gas and/or biogas. Based on the industry-leading Cummins ISX diesel engine with cooled EGR, the LNG version of the engine offers the same horsepower, torque, and efficiency as the base diesel engine it is replacing. The Westport LNG fuel system comprises LNG fuel tanks, proprietary Westport fuel injectors, cryogenic fuel pumps and associated electronic components to facilitate robust performance and reliable operation. The Westport LNG system is 2007 EPA and CARB certified to 0.8g/bhp-hr NOx and 0.01g/bhp-hr PM.

The Kenworth T800 is one of the most versatile trucks on the market today. The T800 serves a variety of applications from linehaul tractors with the luxurious 86" Studio AeroCab® sleeper to severe service off-highway dump trucks and urban pickup and delivery vehicles. This operational versatility, coupled with its reliability and high resale value, gives the T800 high levels of customer satisfaction. The Westport ISX G engine is fuelled with LNG – a safe, cost effective, low carbon, and low emissions fuel – and is available with 400 and 450 horsepower ratings and up to 1,750 lb-ft torque for heavy-duty port, freight and vocational applications. LNG fuel tanks can be configured to suit customer range requirements. LNG heavy-duty trucks are eligible for federal tax credits in the United States and may be eligible for other state-specific emissions credits.

About Westport

Westport, a division of Westport Fuel Systems Inc., engineers the world's most advanced natural gas engines and vehicles. We work with original equipment manufacturers worldwide from design through to production, creating products to meet the growing demand for vehicle technology that will reduce both emissions and fuel costs. Cautionary Note Regarding Forward Looking Statements

This document contains forward-looking statements, including statements regarding the demand for our products, the future success of our business and technology strategies, investment, cash and capital requirements, intentions of partners and potential customers, the performance and competitiveness of our products and expansion of product coverage, future market opportunities, speed of adoption of natural gas for transportation, growth in demand as a result of new emission standards and terms of future agreements. These

statements are neither promises nor guarantees, but involve known and unknown risks and uncertainties and are based on assumptions that may cause our actual results, levels of activity, performance or achievements to be materially different from any future results, levels of activities, performance or achievements expressed in or implied by these forward looking statements. These risks and assumptions include risks and assumptions related to our revenue growth, operating results, industry and products, the general economy, conditions of and access to the capital and debt markets, governmental policies and regulation, technology innovations, fluctuations in foreign exchange rates, global government stimulus packages, the acceptance of natural gas vehicles in fleet markets, the relaxation or waiver of fuel emission standards, the inability of fleets to access capital or government funding to purchase natural gas vehicles, the sufficiency of bio methane for use in our vehicles, the development of competing technologies as well as other risk factors and assumptions that may affect our actual results, performance or achievements or financial position discussed in our most recent Annual Information Form and other filings with securities regulators. Readers should not place undue reliance on any such forward-looking statements, which speak only as of the date they were made. We disclaim any obligation to publicly update or revise such statements to reflect any change in our expectations or in events, conditions or circumstances on which any such statements may be based, or that may affect the likelihood that actual results will differ from those set forth in the forward looking statements except as required by National Instrument 51-102.
